Art Unit: 3742

In view of newly considered prior art, the Notice of Allowance dated 3/20/08 is hereby vacated, and prosecution reopened.

The amendment filed 12/19/07 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the "printing device" disposed above the working platform, in amended paragraphs [0011] and [0015], amended Figure 2, and amended claim 1.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Amended claim 1 recites "a printing device disposed above the working platform," which, with new figure 2, is new matter.

The claims will be treated on the merits, disregarding the new matter.

Claim Rejections - 35 USC § 102

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. 4855572.

Referring to Figs. 1 & 2, col. 5, line 64, through col. 6, line 7, US'572 discloses a "working platform" 4 with a "resistance heater" 28, and control 6.

The Examiner notes firstly that a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

The heating of a transparent slab, with or without printed dots, is an intended use of the recited "platform." Heater 4 is clearly capable of heating a "transparent slab." The control 6 operates by means of a potentiometer, which continuously varies the temperature setting from zero to a maximum value, hence is inherently capable of the recited range of values.

Response to Arguments

Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.
